

2D Modelling of Fold Mechanics & Biot's Law Validation

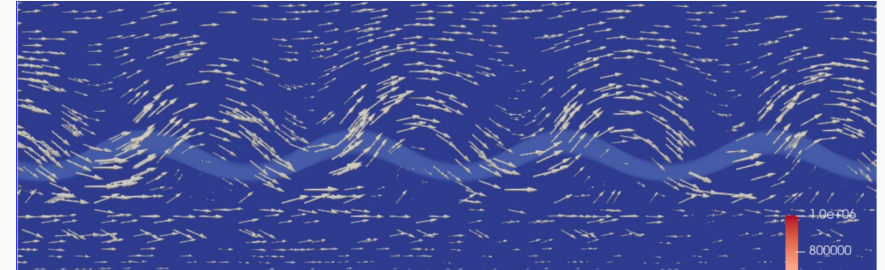

Charbak (IISER Thiruvananthapuram) | Dr. Dip Ghosh (Calcutta University)

Simulation Setup: At $t = 0$, the middle layer has a viscosity difference. A piston on the left pushes the system rightward to initiate folding.

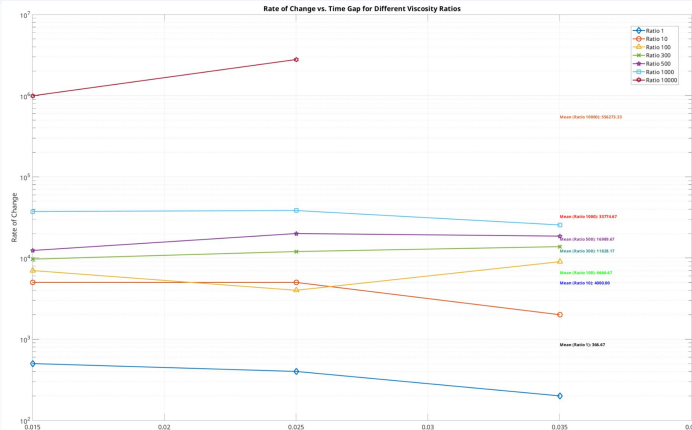

Initial State ($t = 0$)

Final State ($t = 12$)

Rate of Change vs Time Gap (Viscosity Var.)

Mean Rate of Change vs Viscosity (ln-ln)
